*The positive thinker sees the invisible, feels the intangible,
and achieves the impossible."*

– Winston Churchill

THE POWER OF POSITIVE THINKING

Positive thinking is one of the key factors that can lead you to the path of success. IT is nothing but the art of turning failures into lessons, to focus on the brighter side of life, to find humour even in a difficult situation and to expect positive results.

It is rightly said, "If you don't like something, change it but if you can't change it then change the way you think about it. It is true that a man sees in the world that he carries in his heart.

Negative thinking has an immediate, destructive impact on one's life that hinders a person from reaching his goal. A person with a negative attitude may experience feelings of sadness, depression, apathy, anxiety, fear and low esteem but a person with a positive attitude is always prepared to meet greater challenges in life and is able to overcome the obstacles easily.

In order to bring positivity in your life try to practice gratitude, smile often and do something kind. It also becomes imperative to watch your thoughts, words and actions. Let your thoughts guide your actions and actions shape your character.

A positive frame of mind will always generate happiness, improve relationships and attract success in life.

REDUCE, REUSE, RECYCLE AND REFUSE

As conscientious future citizens of India, we at MVN are committed to protecting and preserving our planet. It is a pressing need of time that the young Indians are guided about Waste Management. India generates hundreds of million tonnes of Garbage yearly. As responsible citizens we have to fulfill responsibility towards the waste WE GENERATE.

“Waste will no more be waste, as long as we give it its rightful place.”

Students had an informative and motivating workshop on Zero Waste Management by Mr. Rohit Chawla (Resource person from Safai bank of India), wherein they gained valuable information about segregating waste, Multi Laminated Packaging and its disposal. It is a simple and effective mechanism to dispose millions of waste items efficiently without littering the planet.
